

130 T Curved 6.0

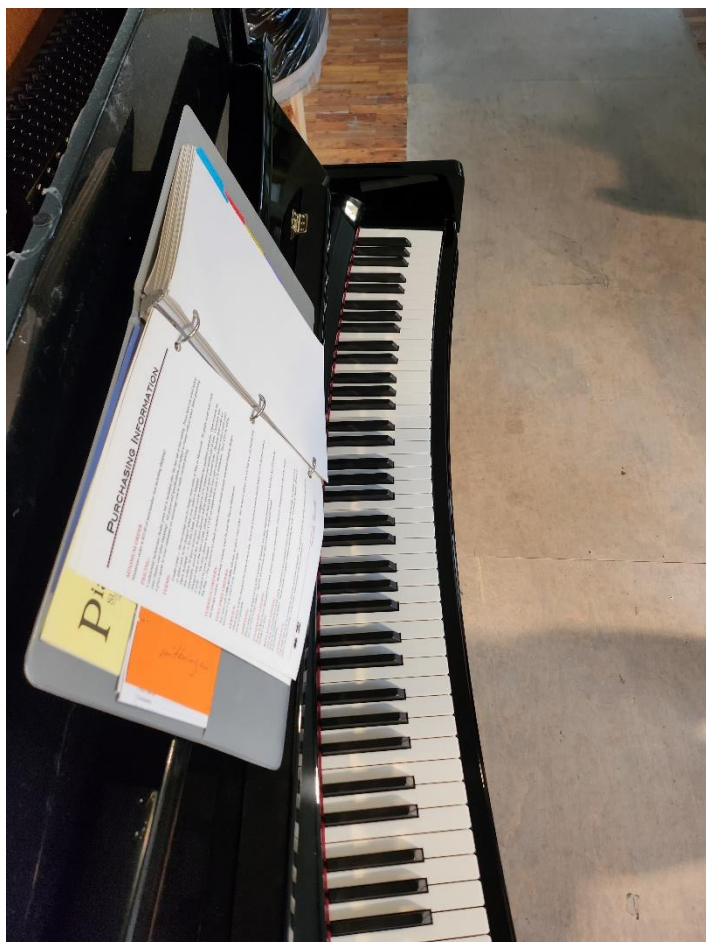

New ! Fall 2024

fig. on top new position of the front panel = wide angle in between fallboard and front panel created by an angled pilastre strip; it creates 10mm mor fallback of the music desk as well

fig. below: traditional position of the front panel = sharp angle in between fallboard and front panel because of the straight pilastre strip

The music rack is capable to carry heavy /thick scores.

These scores are standing on their backside („spine“) comparable to grand piano racks. That's why its easy to turn the pages.

The front of the music desk does not overlap, it does not cover the rear of the keys, allowing to play comparably to a grand piano.
